Personal Statement

I'm a personable, creative and detail focused Software Engineer. I'm a Makers Academy graduate and spent three months at Goodlord as a Software Engineering Intern. I've deployed to production both my [Portfolio website](#) and my multi project API, which includes my fundraising tracking app [Ready & Raising](#). Before moving into tech I spent 8+ years in SEN education, where I developed strong communication, mentoring, and problem solving under pressure. What motivates me is building reliable software that has a positive impact on users, with clear standards, collaboration, and continuous improvement.

Technical Projects

[Personal Portfolio Website](#)

- React / Next.js portfolio showcasing projects and experience

[Ready & Raising](#)

- FastAPI backend unifying fundraising (JustGiving) and training/activity data for supporters.
 - Hybrid caching (in-memory, local JSON, Supabase) for performance and resilience.
- Security & operations: API key auth, rate limiting, health checks, metrics, structured error handling.
 - Docker deployment on DigitalOcean; documented architecture and API behaviour.

Education

Software Engineer

[Makers Academy](#) - 16 week Intensive
Bootcamp 04/2022 – 07/2022

BA Acting and Contemporary Theatre

1st Class East 15 Acting School
2009 – 2013

Professional Experience

Software Engineering Intern Goodlord 10/2022 – 01/2023

- Built automation scrapers in python to automate filling in council forms for changes of occupancy. Used my fresh understanding of python and selenium to support the other interns when they came across blockers.
- Added new React component functions to the tenancy journey to support flow throughout the platform, while adding accessibility and value to the customers. Helped to support the other interns with React questions and blockers while working on their tickets.
- Using Microsoft Azure Form recognizer with machine learning to teach a model to identify fields on a bank statement to pass and collect the information through a C# parser.

SEN Class Room Teaching Assistant Samuel Rhodes School 02/2020 – 12/2021

- Being neurodiverse myself and displaying my own personal strengths and weaknesses. Using my skills of empathy I showed them that no matter their diagnosis, everyone has a personal basket of skills that are just as valid and valued as others. Empowering them to achieve their goals.
- Using my years of experience and leadership skills I often trained and mentored new TA's and provided feedback to higher management.
- While leading communication and self-independence lessons I identified the lack of accessible resources, so using my initiative skills I built and delivered tailor made resources from scratch.

SEN Agency Class Room Teaching Assistant Sugarman Education 12/2013 – 02/2020

- Using my skills of adaptability I worked in a range of different schools and environments that would often change from day to day. From mainstream to SEN Pupil Referral Units. Adapting to new environments quickly and injecting my skills into the team, to support the needs of the students.
- Using my combined skills of personal resilience and emotional compassion I was able to proactively defuse high pressure physical situations between multiple students which would have ended up putting the students safety in danger. Often culminating in having to reassure and console a student who attacked me in the process.
- Using my skills of quick learning and intuition management progressed me to working with some of the most challenging 1:1's in the schools. Where I'd work with several 1:1's over a day as I provided a calm and supportive environment as I successfully met their additional needs.
